SUMMARY

Full-Stack Developer & AI Enthusiast specializing in PHP, and the PERN stack. Demonstrated expertise in integrating IoT hardware with Computer Vision (YOLO) to solve real-world problems. Developed a bird deterrent system featuring a predictive forecasting model, showcasing a strong command of end-to-end system architecture, real-time data processing, and predictive analytics. Committed to building scalable, high-performance web applications.

SKILLS

Technical Skills

- Full-Stack Development: JavaScript, Node.js, Express, PHP, Laravel.
- Frontend & Mobile: React.js, Flutter (Dart), HTML5, CSS3, Bootstrap 5, Tailwind CSS.
- Tools & DevOps: Docker, Docker Compose, Git, GitHub
- Database & ORM: PostgreSQL, MySQL, Prisma ORM.
- AI & Data: YOLO, Forecasting/Predictive Modeling.

PROJECTS

Featured Projects

- IOT-Based Bird Deterrent for Fish Farms using Computer Vision and Trend Analytics (PHP)
- Full-Stack Document Management System for Hijo Resources Corporations (PERN)
- Inventory and Point of Sales System (PHP)

WORK EXPERIENCE

Programmer Intern, Hijo Resources Corporation

February - May 2026

- Architected and containerized a full-stack Document Management System (PERN) to centralize corporate file tracking.
- Developed a cross-platform QR scanning module to bridge the gap between physical document movement and digital tracking.
- Enhanced security and efficiency by implementing an E-Signature feature, replacing manual approval workflows.
- Built a dashboard to visualize document turnaround times, helping management identify and resolve workflow bottlenecks.
- Leveraged Docker Compose to orchestrate backend, frontend, and PostgreSQL services, ensuring seamless team collaboration.

EDUCATION

Bachelor of Science in Information Technology

August 2022 - Present

Expected Graduation Date: June 2026

- Capstone on "IOT-Based Bird Deterrent for Fish Farms using Computer Vision and Trend Analytics".
